

FastAPI Docker App

This project is a simple FastAPI application deployed inside a Docker container. It demonstrates how to set up and run a FastAPI server with Docker from scratch.

■ File Upload Endpoint

The app also supports file uploads through the `/upload/` endpoint.

Example Request (using curl):

```
curl -X POST "http://localhost:8000/upload/" -H "accept: application/json" -H  
"Content-Type: multipart/form-data" -F "file=@yourfile.txt"
```

Example Response:

```
{ "filename": "yourfile.txt" }
```
